

Straxferno

Vestibule: using strax

Straxferno course

Aims:

- Train expert analysts and developers
- Spread knowledge of strax(en) internals
- Train new strax maintainers

This is a **discussion course**. There are (almost) no lectures.

- Helps to do readings before we discuss them
- Study questions: discussed together
- Exercises: individual work, could discuss if useful

Today

Intro

- Welcome!
- Why / what is strax?
- Structure of course

Questions / discussion

- Study questions
- Your questions

Preview of next week

Why strax?

100x faster processing

Full processing as online monitoring

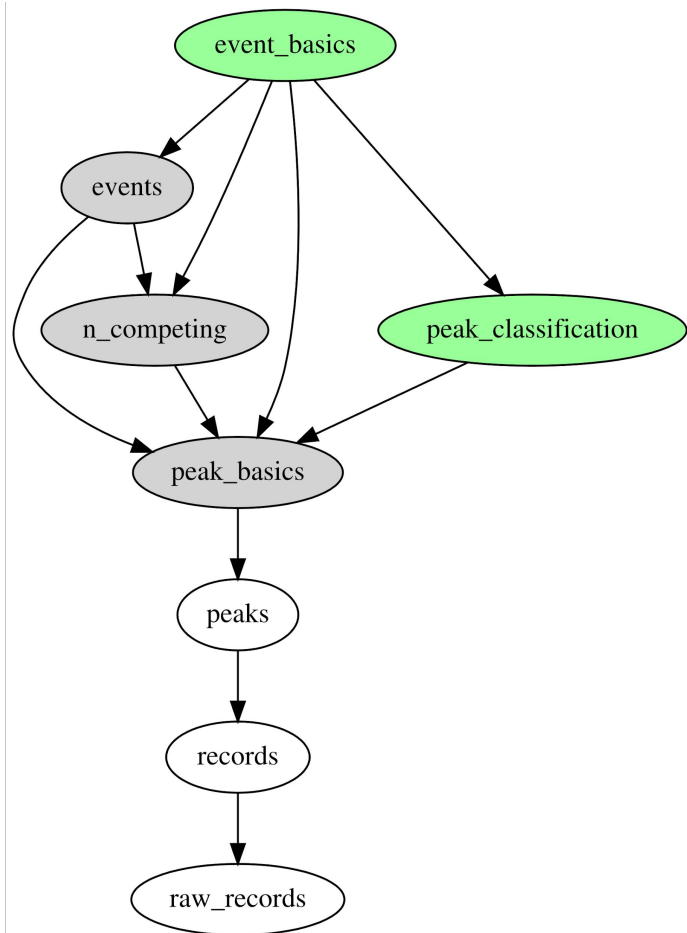

Improved analysis experience

Easy to change low-level settings

Data reduction without a trigger

Save everything while using less storage

What is strax really?

Analyst:

“Load `event_basics` for run 142,
with S1 coincidence requirement = 2”

Strax, behind the scenes:

1. Build graph of dependencies
2. Find which data types can be loaded
3. Compute others that are needed

Analyst receives dataframe

Computed dataframes are now stored
(with tracking of the custom options)

The software stack

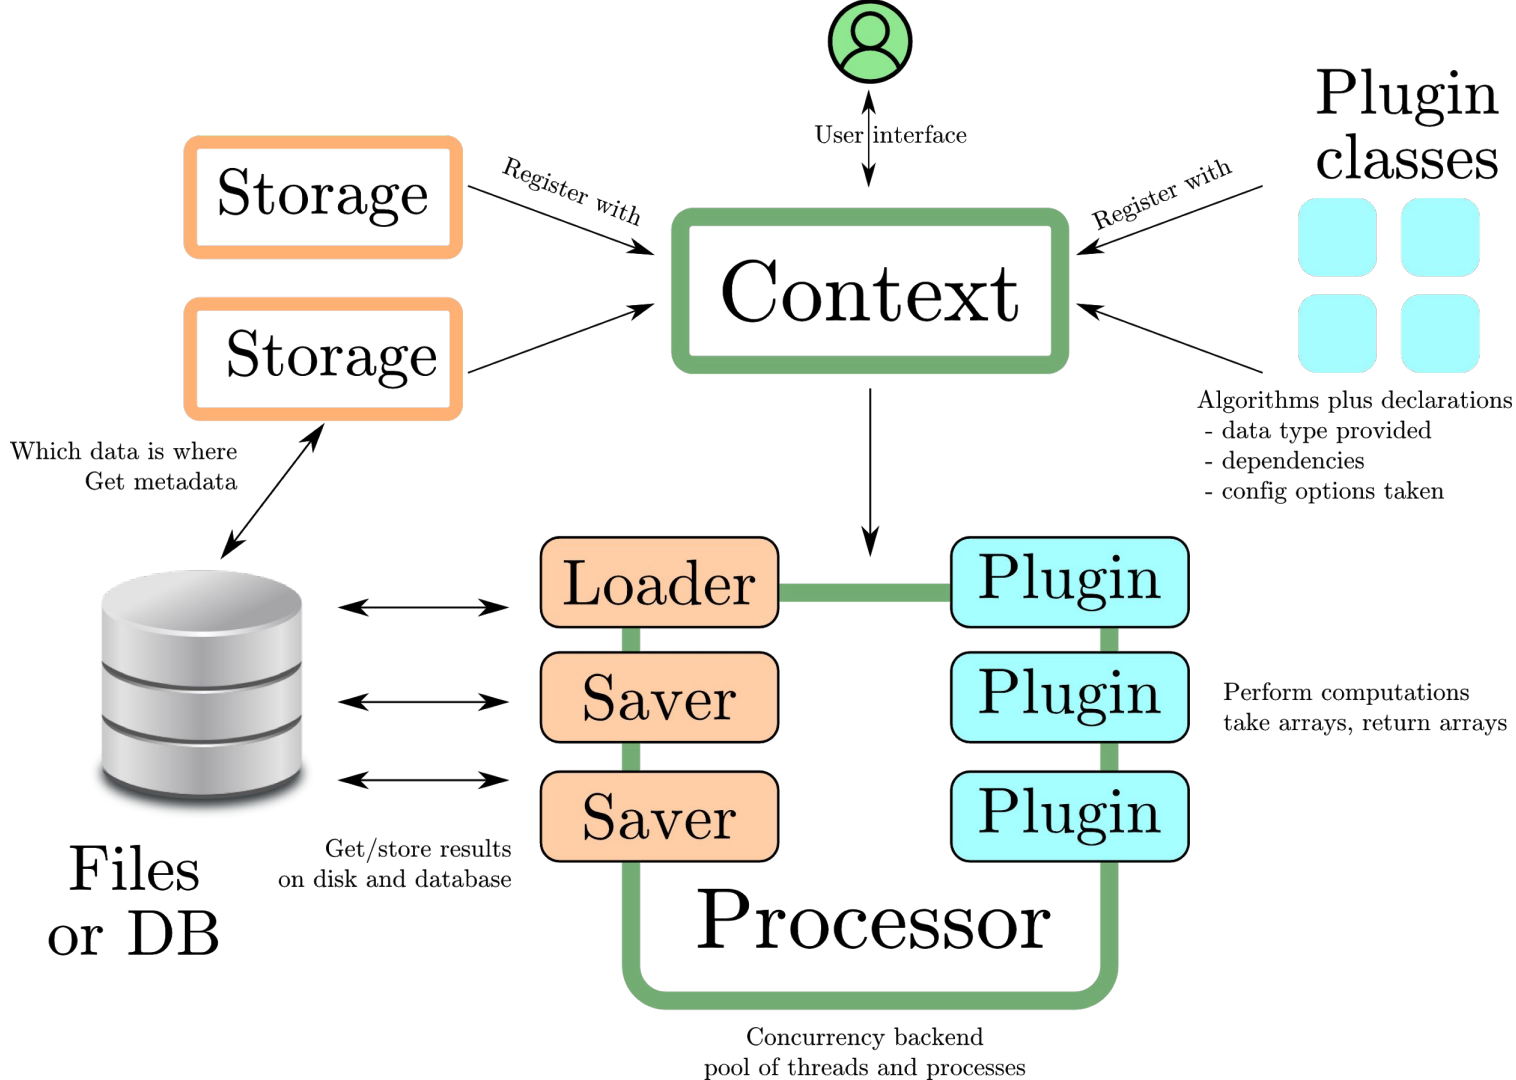

Everything else: analysis notebooks,
processing managers, monitoring tools

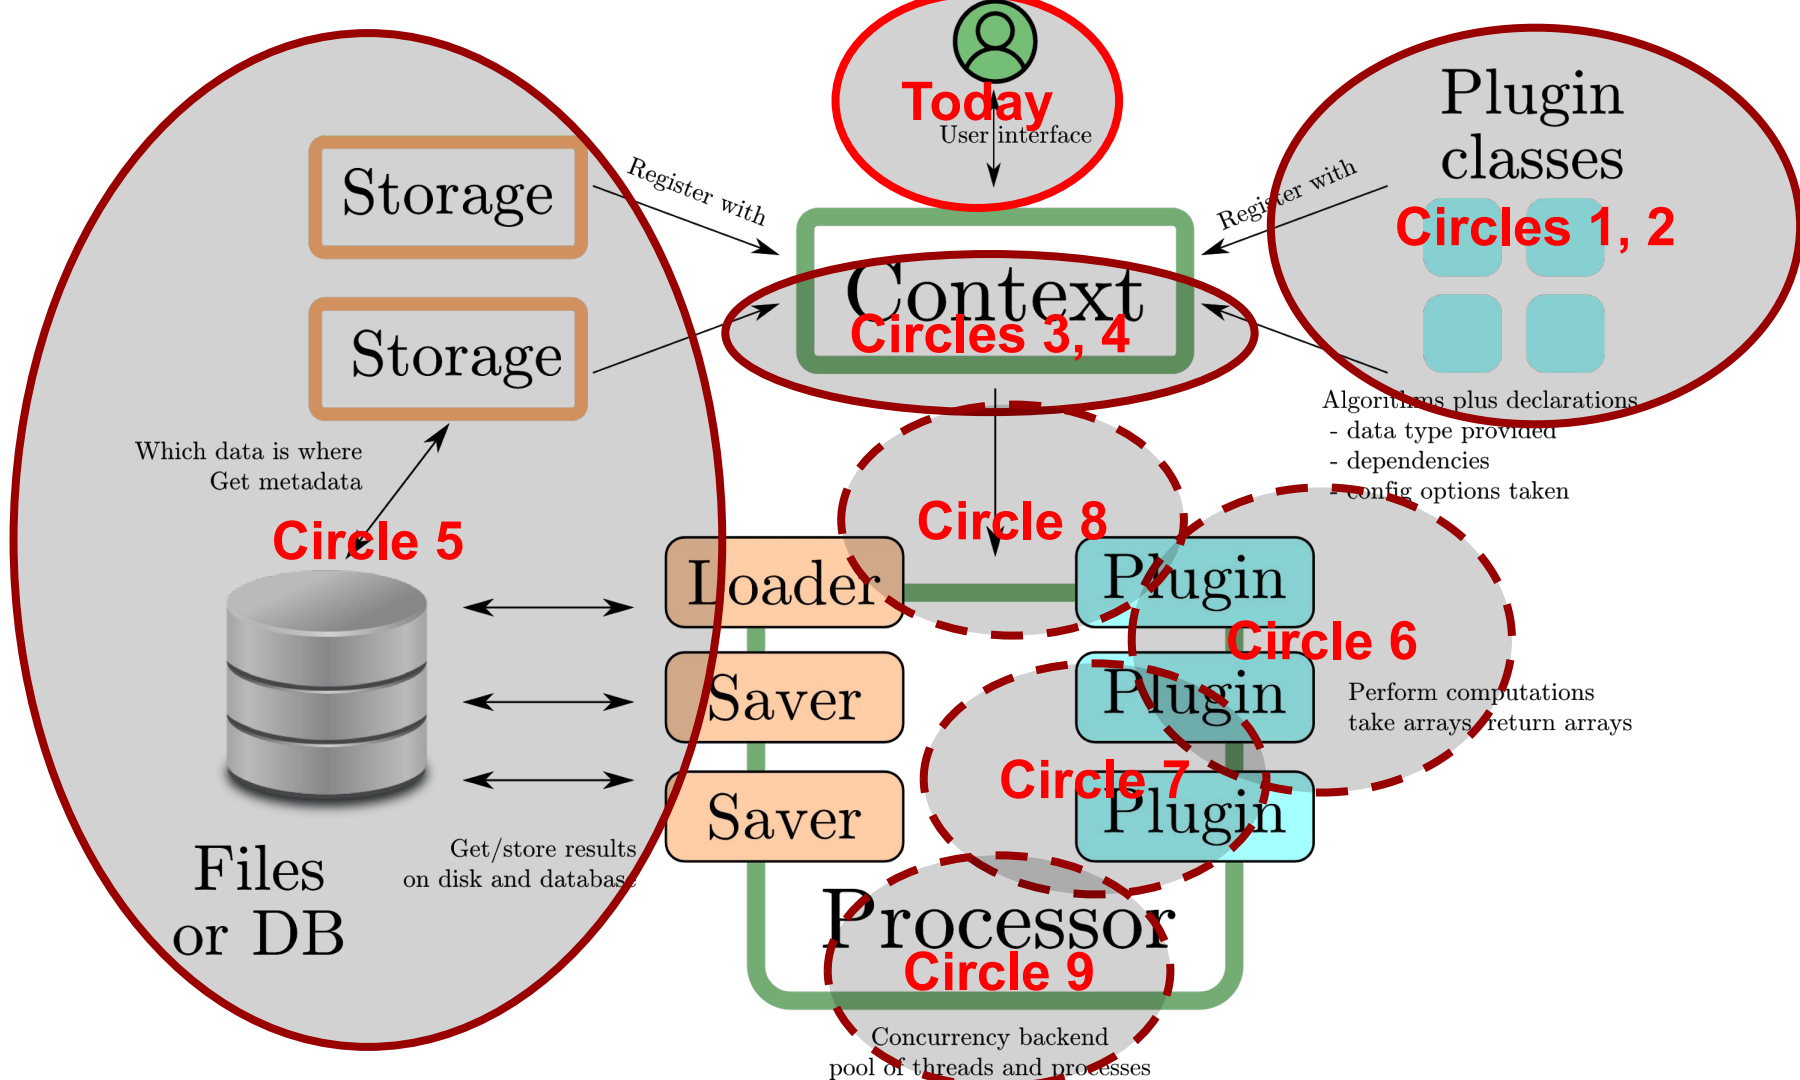

straxen

XENON-specific algorithms, interfaces
and configuration

strax

Data flow framework,
basic algorithms

| Session | Date |
|-----------------------------------|-----------------------|
| 0: Using strax | Friday 15 May 14:30 |
| 1: High-level processing | Tuesday 19 May 15:00 |
| 2: Low-level processing | Tuesday 26 May 15:00 |
| 3: Loading data and mini-analyses | Tuesday 2 June 15:00 |
| 4: Contexts | Tuesday 9 June 15:00 |
| 5: Storage | Tuesday 16 June 15:00 |
| 6: Plugin implementation | Tuesday 23 June 15:00 |
| 7: Data flow | Tuesday 30 June 15:00 |
| 8: Processing setup | Tuesday 7 July 15:00 |
| 9: Mailboxes | Tuesday 14 July 15:00 |

How **NOT** to ask for help

“Hi Jelle, my kernel is crashing, what should I do?”

“Anyone else getting a lot of ValueErrors lately?”

How to ask for help

Read the [analysis guide](#). See also its linked resources. Check / search gitter. Search google and stackoverflow.

Post in gitter (analysis, students_only, or strax), using [gist](#) if it's long:

- What **environment** + strax(en) **versions** are you running
- What **code** are you running
- What **error + traceback** do you get
- What did you already try and did not work

If you suspect a strax(en) bug, you can also open a github issue

Got help? Pass on the good spirit and help others.
